### Durable Construction

The Comfortmax AFO is comprised of laminated carbon fiber, and is designed to easily handle patient weights up to 285lbs without splintering or breaking.

### Lightweight and Low- Profile

Weighing in at 0.6lbs, the Comfortmax AFO fits easily into most shoes and is light enough that most patients will forget they are wearing it.

### Increased Performance

A carefully-designed, rocker style foot plate limits plantar movement while providing an excellent high-energy return, helping patients regain a normal gait and reducing the risk of tripping/falling.
