

Premium Air Walker

HCPC L4360 Approved

Designed to treat soft tissue injuries, grade II and III sprains, and stable fractures, the premium air walker accommodates swelling patterns that occur throughout the rehabilitation process. Using a pneumatic lining system, the premium air walker provides compression that not only increases stability, but also decreases pain and is adjustable for a custom fit. The comfortable foam liner coupled with hook and loop fastening straps allow for quick and easy application, while the low-profile rocker bottom is specially engineered to help promote a natural, stable gait. Available in low and high top models.
