

Secure and nimble access.

Turn any electronic lock into a smart lock.

Unlock common access points from any smartphone.

Nimbio enables your residents to open their buzzer building or gate with their smartphone. You can buzz service and delivery people in or revoke access to anyone at any time, in a matter of seconds. Nimbio works with your existing electronic access point for a low-cost, easy integration.

It's safer than a key-fob, more secure than a lockbox or entry code, and totally customizable. Nimbio relies on cellular service and works with multiple carriers worldwide. This means that even if the WiFi is out, Nimbio is still on. The best part? Easily control it all from your phone or office computer.

[Add Nimbio To Your Property](#)

Uses cellular service instead of Wifi

Installs on top of existing solutions

Share and manage keys on the go

Headquartered in the USA

Modernized access control. Happier tenants.
Improved property safety and security.

Secure and nimble access.

Manage common access points right from your phone.

- Nimbio works with your existing electronic doors, gates, key fobs, codes, and more for a seamless integration.
- Grant keys, revoke keys, and review access logs from the Community Manager dashboard.
- Eliminate late night lock out calls, lost key fobs and the risk of untrackable, shared keys and entry codes.
- Keep tenant packages safe and ensure reliable, secure, delivery every time.
- Nimbio's patented technology is cloud-based which means the most up-to-date, problem-free service is always available with no hardware upgrades necessary.
