

10 YEAR MANUFACTURER'S LIMITED WARRANTY

All parts of this Kingston Brass faucet are warranted to the original retail purchaser to be free from defects in material and workmanship for a period of Ten(10) years from the date of purchase as shown on the purchaser's receipt.

This warranty is limited to defective parts only, labor charges and/or damage resulting from improper installation, repair or replacements, as well as incidental and consequential damages connected therewith are excluded.

Any damage to this faucet as a result of misuse, abuse, neglect, accident, or improper installation or any use not consistent with the instructions furnished by us, will void this warranty. Replacement parts can be obtained from your local dealer. Freight cost is not covered by manufacturer.

CAUTION!!!

1. Water lines must be completely flushed before use, to avoid debris & clogs in your water system leading to reduction of water flow and mal-functioning.
2. Warranty is void if water lines are not flushed prior to use and installation of the new faucet.
3. Use of abrasives of any strength may damage the finish of the faucet and void the product warranty.
4. Do not over tighten your faucet on the countertop during installation. The valve assembly is tested to meet the standards set by ASME A112.18.1 sec 5.8 which is listed at 100 LBF. However, over-tightened or over-torqued nuts may lead to cracks on the valve and will eventually lead to leaking and water damage.
5. Before installation of the faucet to the desired fixture, you need to secure and anchor your console, sink, tub, or vanity cabinet firmly to the wall and to the floor. To ensure your fixture or faucet mounting surface cannot be moved, before installation of the faucet, please test to see if the cabinet or vanity can be moved by hand or body weight. If the faucet mounting fixture is not secure and anchored, it will eventually crack the valve and cause leaking leading to property damage. In order to avoid this, be sure to secure your installation surface. Do not use any Power Tools for assembly and installation which can cause internal fractures to the fixture.

INSTALLATION INSTRUCTIONS Tub Wall Mount Tub Filler with Hand Shower

※ This faucet is to be installed on the wall of your tub, if your faucet needs to be installed on your bathroom wall, please change for model KS266.

BEFORE BEGINNING INSTALLATION:

1. Flush both supply lines to clear any debris
2. Shut off both supply lines after flushing.

1. Apply Teflon tape to short end of threaded nipple and thread onto elbow, apply Teflon tape to elbow and after inserting rubber washer loosely thread onto faucet body.

2. Install faucet on tub by inserting threaded nipple extensions through tub faucet holes, secure from back by threading on lock nuts, do not tighten completely.

3. Make sure faucet is properly centered and tighten all connections.

4. Apply Teflon tape to top faucet outlet and thread on handshower cradle, hose outlet may face either direction.

5. Apply Teflon tape to hose outlet on cradle and thread on hose, making sure the rubber washer has been inserted.

6. Install supply lines as per manufacturer's instructions.

Need Tools:

Basin Wrench

Adjustable Wrench

Teflon Tape

Silicone Sealant

Screwdriver

7. Apply silicone caulking to the underside of the elbow flanges and slide against the tub, clean any excess caulking.

8. Keeping faucet valves closed open both hot and cold water supplies, and check for leaks at elbows connection to supplies and faucet.

9. If no leaks are visible, open both hot and cold valves on faucet and let water run for 1 minute; turn diverter clockwise to allow water to flow out of hose, let water run for 1 minute.

10. Apply Teflon tape on handshower inlet threads and thread on to hose, making sure the rubber washer has been inserted.

Warning!!!

- Do not put any weight, step, or hang on any part of this faucet, this may damage the faucet and cause water damage.
- This faucet was tested and meets ASME/ANSI standards of operation and torque tension; do not use pneumatic or electrical tools for its installation, as this may inadvertently over tighten the connection or attachment hardware of this faucet.
- It is recommended that the tub be situated in an area where the supply lines are not exposed to foot traffic, bumping into the supply lines may damage them and potentially cause a leak.
