# Installation and Instruction Manual ESCO PART # 10543

# **Calcium Chloride Pump**

# WARNING SAFETY PRECAUTION

This product, as well as all Tire Tools, should never be used by persons unless they have been trained properly according to O.S.H.A. Regulation #29CFR 1910.177 entitled "Servicing Single-Piece & Multipiece Rim Wheels." Copy of the Regulation is enclosed or contact this manufacturer.

### SAFETY CAGE OR RESTRAINING DEVICE FROM O.S.H.A. REQUIREMENTS AS WRITTEN IN #29CFR 1910.177 SERVICING MULTIPIECE AND SINGLE PIECE RIM/ TIRES

### (D) TIRE SERVICING EQUIPMENT

- (1) The employer shall furnish a restraining device for inflation tires on all multi-piece and single piece wheels.
- (2) The employer shall provide a restraining device or barrier for inflation tires on single piece wheels unless the rim wheel will be bolted onto a vehicle during inflation.
- (3) Restraining devices and barriers shall comply with the following requirements:
  - (i) Each restraining device or barrier shall have the capacity to withstand the maximum force that would be transferred to it during a rim wheel separation occurring at 150 percent of the maximum tire specification pressure for the type of rim wheel being serviced.
  - (ii) Restraining device and barriers shall be capable of preventing the rim wheel components from being thrown outside or beyond the device or barrier for any rim wheel positioned within or behind the device;
  - (iii) Restraining devices and barriers shall be visually inspected prior to each day's use and after any separation of the rim wheel components or sudden release of contained air.

**10543 CALCIUM CHLORIDE PUMP** 

### **OPERATION MANUAL**

# Husky<sup>®</sup> 1050 Air-Operated Diaphragm Pump

1-inch pump with modular air valve for fluid transfer applications

125 psi (0.86 MPa, 8.6 bar) Maximum Fluid Working Pressure 125 psi (0.86 MPa, 8.6 bar) Maximum Air Input Pressure

Important Safety Instructions Read all warnings and instructions in this manual. Save these instructions.

### Warnings

The following warnings are for the setup, use, grounding, maintenance, and repair of this equipment. The exclamation point symbol alerts you to a general warning and the hazard symbol refers to procedure-specific risk. Refer back to these warnings. Additional, product-specific warnings may be found throughout the body of this manual where applicable.

### FIRE AND EXPLOSION HAZARD

Flammable fumes, such as solvent and paint fumes, in **work area** can ignite or explode. To help prevent fire and explosion:

- · Use equipment only in well ventilated area.
- Eliminate all ignition sources; such as pilot lights, cigarettes, portable electric lamps, and plastic drop cloths (potential static arc).
- · Keep work area free of debris, including solvent, rags and gasoline.
- Do not plug or unplug power cords, or turn power or light switches on or off when flammable fumes are present.
- Ground all equipment in the work area. See Grounding instructions.
- · Use only grounded hoses.
- Hold gun firmly to side of grounded pail when triggering into pail.
- If there is static sparking or you feel a shock, **stop operation immediately.** Do not use equipment until you identify and correct the problem.
- · Keep a working fire extinguisher in the work area.

Static charge may build up on plastic parts during cleaning and could discharge and ignite flammable materials and gases. To help prevent fire and explosion:

- · Clean plastic parts in a well ventilated area.
- Do not clean with a dry cloth.

3	TOXIC FLUID OR FUMES HAZARD
	Toxic fluids or fumes can cause serious injury or death if splashed in the eyes or on skin, inhaled, or swallowed.
	Read MSDS's to know the specific hazards of the fluids you are using.
	Route exhaust away from work area. If diaphragm ruptures, fluid may be exhausted with air.
	Store hazardous fluid in approved containers, and dispose of it according to appli- cable guidelines.
	<ul> <li>Always wear impervious gloves when spraying or cleaning equipment.</li> </ul>
	BURN HAZARD
The	Equipment surfaces and fluid that's heated can become very hot during operation. To avoid severe burns:
	Do not touch hot fluid or equipment.
	<ul> <li>Wait until equipment/fluid has cooled completely.</li> </ul>
	PERSONAL PROTECTIVE EQUIPMENT
	You must wear appropriate protective equipment when operating, servicing, or when in the operating area of the equipment to help protect you from serious injury, including eye injury, inhalation of toxic fumes, burns, and hearing loss. This equipment includes but is not limited to:
	<ul> <li>Clothing and respirator as recommended by the fluid and solvent manufacturer</li> <li>Protective eyewear, gloves, and hearing protection</li> </ul>

### Installation

The Typical Installations shown in FIG. 3 and FIG. 4 are only guides for selecting and installing system components. Contact your **ESCO** distributor for assistance in planning a system to suit your needs.

### **Tighten Fasteners Before Setup**

Before using the pump for the first time, check and retorque all external fasteners.

WARNING
<ul> <li>EQUIPMENT MISUSE HAZARD</li> <li>Misuse can cause death or serious injury.</li> <li>Do not operate the unit when fatigued or under the influence of drugs or alcohol.</li> <li>Do not exceed the maximum working pressure or temperature rating of the lowest rated system component. See Technical Data in all equipment manuals.</li> <li>Use fluids and solvents that are compatible with equipment wetted parts. See Technical Data in all equipment manuals. Read fluid and solvent manufacturer's warnings. For complete information about your material, request MSDS from distributor or retailer.</li> <li>Do not leave the work area while equipment is energized or under pressure. Turn off all equipment and follow the Pressure Relief Procedure in this manual when equipment is not in use.</li> <li>Check equipment daily. Repair or replace worn or damaged parts immediately with genuine manufacturer's replacement parts only.</li> <li>Do not alter or modify equipment.</li> <li>Use equipment only for its intended purpose. Call your distributor for information.</li> <li>Route hoses and cables away from traffic areas, sharp edges, moving parts, and hot surfaces.</li> <li>Do not kink or over bend hoses or use hoses to pull equipment.</li> <li>Keep children and animals away from work area.</li> </ul>
<ul> <li>Comply with all applicable safety regulations.</li> <li>PRESSURIZED EQUIPMENT HAZARD Fluid from the gun/dispense valve, leaks, or ruptured components can splash in the eyes or on skin and cause serious injury.</li> <li>Follow Pressure Relief Procedure in this manual, when you stop spraying and before cleaning, checking, or servicing equipment.</li> <li>Tighten all fluid connections before operating the equipment.</li> <li>Check hoses, tubes, and couplings daily. Replace worn or damaged parts immediately.</li> </ul>
<ul> <li>PRESSURIZED ALUMINUM PARTS HAZARD Use of fluids that are incompatible with aluminum in pressurized equipment can cause serious chemical reaction and equipment rupture. Failure to follow this warning can result in death, serious injury, or property damage.</li> <li>Do not use 1,1,1-trichloroethane, methylene chloride, other halogenated hydrocarbon solvents or fluids containing such solvents.</li> <li>Many other fluids may contain chemicals that can react with aluminum. Contact your material supplier for compatibility.</li> </ul>
<b>PLASTIC PARTS CLEANING SOLVENT HAZARD</b> Use only compatible water-based solvents to clean plastic structural or pressure-con- taining parts. Many solvents can degrade plastic parts and cause them to fail, which could cause serious injury or property damage. See <b>Technical Data</b> in this and all other equipment instruction manuals. Read fluid and solvent manufacturer's warnings.

### Maintenance:

Flush pump with fresh water after each use to prolong life.

**No lubrication required**. Periodically drain debris from filter/regulator bowl. Periodically inspect pump for excessive wear or damage, mainly to the diaphragms, check balls, and valve seats.

# **Operation**:

Install air regulator provided into 1/2" NPT opening in top of pump.

Install muffler into 3/4" NPT opening in bottom of pump.

Connect air supply to air inlet side of pump and set pressure to 40 - 60 p.s.i. Speed of pump is determined by pressure to pump. (Do not exceed 100 p.s.i.) The fluid direction (fill or evac) of pump is controlled by turning the blue handle on the valve at top of pump a 1/4 turn left or right. Neutral is in center. As tire is being filled, the pressure inside the tire will increase. To release internal tire pressure, turn the valve a 1/4 turn to the evacuation position till pressure is relieved. The resume filling tire until full to valve.

Caution:

Do not exceed recommended air pressure for the tire being filled. (Over inflation of the tire can result in personal injury).

# **To Fill Tires:**

### Valve Stem Level (Approximately 80% Fill)

a. Turn tire until valve is at 12 o'clock position.

b. See that the supply hose (10 ft. length) is in calcium tank, well below the liquid level.

c. Connect air supply to pump, start pump. During filling, the tire pressure can be checked at any time by turning Neutral position. Pressure shown on pressure gauge.

d. Continue filling until tire is half full of liquid. This can be determined by tapping tire sidewall or by checking the amount of liquid pumped against total quality. Turn control to Evacuate and allow trapped air to vent out through overflow than turn clock back to **FILL** direction.

12 O'Clock Position

Stem Level Filling

e. Continue to fill until liquid is slightly beyond stem level.

### Mounting

- The pump exhaust air may contain contaminants. Ventilate to a remote area.
- Never move or lift a pump under pressure. If dropped, the fluid section may rupture. Always follow the Pressure Relief Procedure
- Be sure the mounting surface can support the weight of the pump, hoses, and accessories, as well as the stress caused during operation.
- 2. For all mountings, be sure the pump is bolted directly to the mounting surface.
- 3. For ease of operation and service, mount the pump so air valve, air inlet, fluid inlet and fluid outlet ports are easily accessible.

### Grounding

The equipment must be grounded. Grounding reduces the risk of static and electric shock by providing an escape wire for the electrical current due to static build up or in the event of a short circuit.

**Pump:** See FIG. 1. Loosen the grounding screw (GS). Insert one end of a 12 ga. minimum ground wire (R) behind the grounding screw and tighten the screw securely. Connect the clamp end of the ground wire to a true earth ground.

**Air and fluid hoses:** Use only grounded hoses with a maximum of 500 ft (150 m) combined hose length to ensure grounding continuity.

**Air compressor:** Follow manufacturer's recommendations.

Fluid supply container: Follow local code.

**Solvent pails used when flushing:** Follow local code. Use only conductive metal pails, placed on a grounded surface. Do not place the pail on a nonconductive surface, such as paper or cardboard, which interrupts grounding continuity.

Check your system electrical continuity after the initial installation, and then set up a regular schedule for checking continuity to be sure proper grounding is maintained.

### Air Line

- Install an air regulator (C) and gauge to control the fluid pressure. The fluid stall pressure will be the same as the setting of the air regulator.
- 2. Locate a bleed-type master air valve (B) close to the pump and use it to relieve trapped air. Be sure the valve is easily accessible from the pump and located downstream from the regulator.

Trapped air can cause the pump to cycle unexpectedly, which could result in serious injury from splashing.

- Locate another master air valve (E) upstream from all air line accessories and use it to isolate them during cleaning and repair.
- 4. An air line filter (F) removes harmful dirt and moisture from the compressed air supply.
- Install a grounded, flexible air hose (A) between the accessories and the 1/2 npt(f) pump air inlet (D). Use a minimum 3/8 in. (10 mm) ID air hose.

## Air Exhaust Ventilation

The air exhaust port is 3/4 npt(f). Do not restrict the air exhaust port. Excessive exhaust restriction can cause erratic pump operation.

To provide a remote exhaust:

- 1. Remove the muffler (T) from the pump air exhaust port.
- Install a grounded air exhaust hose (U) and connect the muffler (T) to the other end of the hose. The minimum size for the air exhaust hose is 3/4 in. (19 mm) ID. If a hose longer than 15 ft (4.57 m) is required, use a larger diameter hose. Avoid sharp bends or kinks in the hose.
- Place a container at the end of the air exhaust line to catch fluid in case a diaphragm ruptures. If the diaphragm ruptures, the fluid being pumped will exhaust with the air.

### FIG. 2. Vent exhaust air

### **Fluid Supply Line**

See Fig. 3 and Fig. 4

- 1. Use grounded fluid supply lines (G). See **Grounding**, page 7.
- If the inlet fluid pressure to the pump is more than 25% of the outlet working pressure, the ball check valves will not close fast enough, resulting in inefficient pump operation.
- At inlet fluid pressures greater than 15 psi (0.1 MPa, 1 bar), diaphragm life will be shortened.
- 4. For maximum suction lift (wet and dry), see **Technical Data**

### Fluid Outlet Line

See FIG. 3 and FIG. 4

- 1. Use grounded fluid hoses (L). See Grounding
- 2. Install a fluid drain valve (J) near the fluid outlet.
- Install a shutoff valve (K) in the fluid outlet line.

# **Performance Charts**

Test Conditions: Pump tested in water with inlet submerged.

# **Dimensions and Mounting**

### Aluminum (1050A)

A ..... 12.7 in. (323 mm)
B ..... 14.4 in. (366 mm)
C ..... 15.9 in. (404 mm)
D ..... 10.9 in. (277 mm)
E ..... 1.8 in. (46 mm)
F ..... 7.3 in. (185 mm)
G ..... 14.7 in. (373 mm)
H ..... 6.1 in. (155 mm)

- J ..... 3.9 in. (99 mm)
- K..... 10.0 in. (254 mm)
- L ..... 1/2 npt(f) air inlet
- M .... 1 in. npt(f) or 1 in. bspt fluid inlet ports (4)
- N..... 1 in. npt(f) or 1 in. bspt fluid outlet ports (4)
- P..... 3/4 npt(f) air exhaust port

- 10. If you are flushing, run the pump long enough to thoroughly clean the pump and hoses.
- 11. Close the dispensing valve, if used.
- 12. Close the bleed-type master air valve.
- 13. *Pumps with runaway protection:* Disable the prime/flush function by pushing the prime/flush button on the DataTrak.

### **Pump Shutdown**

At the end of the work shift and before you check, adjust, clean or repair the system, follow **Pressure Relief Procedure** 

# Maintenance

### Maintenance Schedule

Establish a preventive maintenance schedule, based on the pump's service history. Scheduled maintenance is especially important to prevent spills or leakage due to diaphragm failure.

### Lubrication

The pump is lubricated at the factory. It is designed to require no further lubrication for the life of the pump.

### Flushing and Storage

- Flush before fluid can dry in the equipment, at the end of the day, before storing, and before repairing equipment.
- Flush at the lowest pressure possible. Check connectors for leaks and tighten as necessary.
- Flush with a fluid that is compatible with the fluid being dispensed and the equipment wetted parts.

Flush the pump often enough to prevent the fluid you are pumping from drying or freezing in the pump and damaging it. Use a compatible solvent.

Always flush the pump and relieve the pressure before storing it for any length of time.

# Operation

### **Pressure Relief Procedure**

Trapped air can cause the pump to cycle unexpectedly, which could result in serious injury from splashing.

- 1. Shut off the air supply to the pump.
- 2. Open the dispensing valve, if used.
- 3. Open the fluid drain valve to relieve fluid pressure. Have a container ready to catch the drainage.

### Flush the Pump Before First Use

The pump was tested in water. If water could contaminate the fluid you are pumping, flush the pump thoroughly with a compatible solvent.

### **Tighten Fasteners Before Setup**

Before using the pump for the first time, check and retorque all external fasteners. After the first day of operation, retorque the fasteners.

### Starting and Adjusting the Pump

- 1. Be sure the pump is properly grounded. Refer to **Grounding**
- Check fittings to be sure they are tight. Use a compatible liquid thread sealant on male threads. Tighten fluid inlet and outlet fittings securely.
- 3. Place the suction tube (if used) in fluid to be pumped.

**NOTE:** If fluid inlet pressure to the pump is more than 25% of outlet working pressure, the ball check valves will not close fast enough, resulting in inefficient pump operation.

- 4. Place the end of the fluid hose into an appropriate container.
- 5. Close the fluid drain valve.
- 6. Back out the air regulator knob, and open all bleed-type master air valves.
- 7. If the fluid hose has a dispensing device, hold it open.
- 8. *Pumps with runaway protection:* Enable the prime/flush function by pushing the prime/flush button on the DataTrak.
- Slowly increase air pressure with the air regulator until the pump starts to cycle. Allow the pump to cycle slowly until all air is pushed out of the lines and the pump is primed.

### FIG. 4. Typical floor-mount installation (polypropylene, 1050P, pump shown)

### Key for Fig. 3 and Fig. 4:

- A Air supply line
- B Bleed-type master air valve (required for pump)
- C Air regulator
- D Air inlet
- E Master air valve (for accessories)
- F Air line filter
- G Fluid suction line
- H Bung adapter
- J Fluid drain valve (required)
- K Fluid shutoff valve
- L Fluid line
- M Fluid inlet (Aluminum, FIG. 3, four ports, one not visible; Plastic, FIG. 4, center or end flanges available; Stainless Steel, not pictured, one port)

- N Fluid outlet (Aluminum, FIG. 3, four ports, one not visible; Plastic, FIG. 4, center or end flanges available; Stainless Steel, not pictured, one port)
- R Ground wire (required for aluminum, conductive polypropylene, and stainless steel pumps; see page 7 for installation instructions)

### **Operating Temperature Range**

NOTICE

Temperature limits are based on mechanical stress only. Certain chemicals will further limit the maximum operating temperature range. Stay within the temperature range of the most-restricted wetted component. Operating at a temperature that is too high or too low for the components of your pump may cause equipment damage.

	0	perating Temp	erature Range	10
	Alumin Stainless St		Polyprop Conductive Po Pum	olypropylene
Diaphragm/Ball/Seat Material	Fahrenheit	Celsius	Fahrenheit	Celsius
Acetal (AC)	10° to 180°F	-12° to 82°C	32° to 180°F	0° to 82°C
Buna-N (BN)	10° to 180°F	-12° to 82°C	32° to 180°F	0° to 82°C
FKM Fluoroelastomer (FK)*	-40° to 275°F	-40° to 135°C	32° to 180°F	0° to 82°C
Geolast <sup>®</sup> (GE)	-40° to 150°F	-40° to 66°C	32° to 150°F	0° to 66°C
Neoprene overmolded diaphragm (CO) or Neoprene check balls (CR or CW)	0° to 180°F	-18° to 82°C	32° to 180°F	0° to 82°C
Polypropylene (PP)	32° to 180°F	0° to 82°C	32° to 180°F	0° to 82°C
PTFE overmolded diaphragm (PO)	40° to 180°F	4.0° to 82°C	40° to 180°F	4° to 82°C
PTFE check balls or two-piece PTFE/EPDM diaphragm (PT)	40° to 220°F	4° to 104°C	40° to 180°F	4° to 82°C
PVDF (PV)	10° to 225°F	-12° to 107°C	32° to 180°F	0° to 82°C
Santoprene <sup>®</sup> (SP)	-40° to 180°F	-40° to 82°C	32° to 180°F	0° to 82°C
TPE (TP)	-20° to 150°F	-29° to 66°C	32° to 150°F	0° to 66°C

\* The maximum temperature listed is based on the ATEX standard for T4 temperature classification. If you are operating in a non-explosive environment, FKM fluoroelastomer's maximum operating temperature in aluminum or stainless steel pumps is 320°F (160°C).

# **Technical Data**

Maximum fluid working pressure Air pressure operating range Maximum air consumption Air consumption at 70 psi (0.48 MPa, 4.8 bar),	20-125 psi (0.14-0.86 MPa, 1.4-8.6 bar)
20 gpm (76 lpm)	
Maximum free-flow delivery	
Maximum pump speed	
Fluid displacement per cycle	
Maximum suction lift	
Sound Power*	1/6 11. (3.2 1111)
at 70 psi (0.48 MPa, 4.8 bar) and 50 cpm	78 dBa
at 100 psi (0.7 MPa, 7.0 bar) and full flow	
Sound Pressure**	
at 70 psi (0.48 MPa, 4.8 bar) and 50 cpm	
at 100 psi (0.7 MPa, 7.0 bar) and full flow	
Operating temperature range	
Air inlet size	1/2 npt(f)
Fluid inlet size Aluminum (1050A)	t in not/f) or t in hont
Aluminum (1050A)	
Fluid outlet size	
Aluminum (1050A)	1 in. npt(f) or 1 in. bspt
	on and a set over the second of the second of
Weight	
Aluminum (1050A)	23 lb. (10.5 kg)
Wetted parts	
•	aluminum and material(s) chosen for seat, ball, and
	diaphragm options
New wetter level and and	
Non-wetted external parts	aluminum apated parken steal
Aluminum (1050A)	auminum, coaleu carbon sleer

\* Sound power measured per ISO-9614-2. \*\* Sound pressure was tested 3.28 ft (1 m) from equipment.
