Specifications & Accessories

MODEL 91051

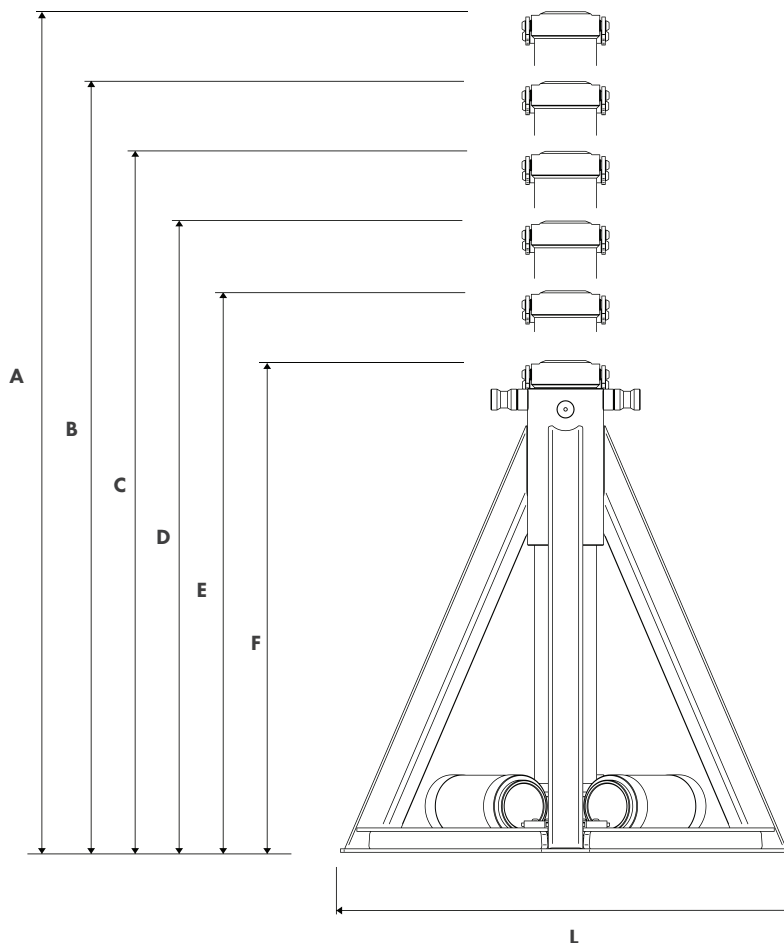

The **Mammut 44-Ton Jack Stand (Model 91051)** is a completely different take on standard jack stands sold in the market today. With the combination of innovative design and practicality, each stand is designed as a professional solution for supporting heavy loads safely.

Starting with the size and capacity of the Mammut Jack Stand; it was designed to be capable of handling a high tonnage capacity (44 tons), while still maintaining a lightweight and easy to maneuver construction. The unique design of this jack stand works by using a simple safety block system to raise or lower the stand to the desired height and locking it in place, allowing for a reduction in weight of the stand and for easier operation/positioning under load.

Each jack stand (sold individually) comes complete with three safety blocks (see specs for more information) that allow for six different height combinations. Also available is the **Mammut 44-Ton Jack Stand Moving Trolley (Model 91054)**, designed to position the stand(s) even more efficiently in the right location, eliminating lifting of stands manually or other machinery. This stand was also designed to be used without the use of electric or air, making it a convenient choice for any service center or repair facility.
