EasyWash® - a revolutionary way to remove calcium buildup and stains on all types of pools

Pool restoration with little or no acid to improve surface cleaning... the Easy-Wash way!

Scaletec Plus® Easy-Wash No Drain:

For all pool types, reduce chlorine levels to 3 ppm or less, turn off salt chlorinator, do not shock pool prior to or during cleanup period and lower water pH to 7.0 - 7.4.

1. Pour one 64 oz bottle of Scaletec Plus per 10,000 gallons directly into pool.
2. To clean tile, raise and maintain water above scale line throughout cleaning period.
3. Brush tile and surfaces to speed up scale removal.

Features & Benefits:

- Cleans surfaces, equipment, tile and areas acids do not reach.
- See visible cleaning results within 1 to 2 weeks.
- Removes stains caused by metal algaecides that acid will not remove.
- In some cases, just pressure wash pool surfaces to remove buildup.
- Restore pool finish beauty without harmful acids, tedious brushing and pool draining.
- Safe for swimmers to use pool.

Scaletec Plus® Easy-Wash Clean-Drain-Refill:

Easy-Wash is a safer way to thoroughly spring clean and descale calcium buildup throughout the entire pool with little or no acid needed.

1. Add Scaletec Plus 1 to 2 weeks before scheduled cleaning.
2. Follow steps #1, #2 and #3 above.
3. After draining pool, you may only need to power wash to remove remaining buildup.

Note: In some cases, a light acid wash may still be needed to further enhance the final restored appearance.

Features & Benefits:

- Minimizes cleanup time, hazards to workers, and tedious scrubbing of tile.
- Reduces acid etching typically associated with traditional acid washing.
- Cleans surfaces, equipment, tile, filter, plumbing, heat exchange tubes, sensors and areas acids just do not reach.
- Removes stains caused by metal algaecides.
- Will not darken or damage finish.

Scaletec Plus® Enhanced Easy-Wash: to remove calcium scale or stain with less or no acid

All types pool finishes (existing, new or remodeled) can now be restored with significantly less acid (or none at all), surface damage and hazards to workers exposed to harsh acids. This new enhanced Easy-Wash procedure utilizes descaling technology by using Scaletec Plus calcium scale and stain remover.

Enhanced procedure:

1. Add 1 (one) bottle of Scaletec Plus® (64 oz. size per 10,000 gals.) one to two weeks before a scheduled acid wash. Operate pool pump normal duty cycle. Keep chlorine levels at 3.0 ppm or less (the lower the better) and use an algaecide (if needed but not one containing metals) to keep pool water clear.
2. To also clean the tile from calcium-lime buildup, raise and maintain the water level during the pre-treatment phase. This will soften and help dissolve the scale.
3. If possible, return weekly and use a combo brush to scrub trouble areas with heavier scale-stain buildup. It is recommended to complete cleanup in 4 to 6 weeks.

Power wash option:

Before proceeding with scheduled acid wash, many service techs have found that power washing is all that is needed to remove scale and stain on pool finish and tile.

Acid wash option:

1. Follow safe draining procedures as per your region and time of year.
2. Inspect and evaluate finish for effectiveness of pre-treatment results.
3. Test a small area with a reduced percentage of acid to determine the total amount of acid that will be needed to finalize the remove all scale and stains.
4. Perform acid wash as normal.
5. Now that you're done! We suggest you keep your work beautiful by adding Beautec.

For a copy of the above Easy-Wash procedures, visit EasyCare Products website www.easycarewater.com and select Scaletec Plus product page to locate "Scaletec Plus Easy-Wash" document.
