HEATER ASSEMBLY CROSS REFERENCE GUIDE	109-128

If the Cross Reference Guide does not have the correct heater assembly your looking for, we offer our Universal Rite-Fit Heater assemblies in various configurations. By simply taking measurements of the heater your replacing and using our guidelines below, you can find the correct Universal Rite-Fit Heater to use as a replacement.

Heater Assembly Measurements

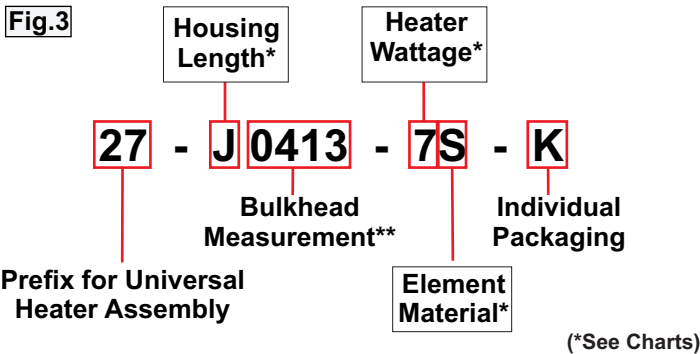

For proper measurements: Position the heater assembly with the flange closest to the bulk heads on the left side and measure from left flange to the first bulkhead as shown in Fig.1. The bulkhead measurement is key in determining the correct replacement. To indicate the proper position of items, always use the left side profile with the bulk heads in the 12:00 position as shown in Fig.2. Measurement results will determine which Universal Rite-Fit Heater would work for you

See part number description below. (Fig.3).

Note: Studs and Cover Plate are on adjustable bands that are provide with all Universal Rite-Fit Heaters.
