

BOND SAFE 680 – Pool Water Bonding Kit

MADE IN USA

Patent Pending

Bond Safe 680 was invented in order to bond pool water in accordance with the National Electrical Code (NEC) 680.26(C). Made of non-corrosive stainless steel, Bond Safe 680 maintains constant contact with the pool water to ensure that the pool is effectively bonded. Some of the features of this product include:

- Easy installation
- All necessary mounting hardware included
- Placed out of the way on the side wall of the skimmer, below the skimmer basket

This product is patent pending and Underwriters Laboratories (UL) listed. The UL approval process is one of the more rigorous programs for new products to the market. UL performs a litany of tests to verify that the product adheres to the NEC 2008 electrical code and is safe for use. The NEC 2008 Code was a direct result of Frank Lambert's field study on the effects of stray voltage on pools. Frank is a Program Manager at the Georgia Institute of Technology; he has stated that in order for any product to effectively bond the pool water, it must be in constant contact with the body of water. Bond Safe 680, which is fastened to the skimmer, does this whereas other products on the market that are located in the plumbing, do not.

Bond Safe 680 is one of the few and certainly the most user friendly product on the market that adheres to this code. Most importantly, Bond Safe 680 will create a safer environment for swimmers and will not interfere with normal pool activity and operation.

Models Available:

INGROUND POOL

Model #: BS680IG

ABOVE GROUND POOL

Model #: BS680AG
