

GUS-SI *The Shoulder Immobilizer*

PDAC APPROVED L3670

GUS-SI provides unparalleled patient comfort and support.

- **GUS-SI** incorporates the posterior GUSSET Panel which provides an intimate and anatomical cradle for the posterior arm, fitting the sling to the arm and not the arm to the sling as typical braces do.
- **GUS-SI** eliminates pressure and irritation with its soft double rolled straps at the neck and waist. They attach and adjust from each end providing excellent comfort.
- **GUS-SI** incorporates loop-sliders allowing the immobilization straps at both the wrist and elbow to slide close to the body and away from the hand and elbow. This increases support and prevents irritation.
- **GUS-SI** Super comfortable thumb loop rests the thumb, while preventing sling migration.
- **GUS-SI** incorporates double round buckles at the wrist and single round at the back which allows straps to seek their best attachment point. This also allows the sling to be cradled on the arm, eliminating painful shrugging of the shoulder and lacing the wrist through the wrist attachment.
- Quality construction and deep pocket pattern that many will copy, but none will duplicate.

Posterior Gusset and posterior immobilization strap slider and strap seeking its best attachment location

Thumb rest and wrist strap slider

INNOVATIONS

GUS *The Sling*

Breaking new
ground in patient
comfort.

- **GUS** is short for gusset, the way all slings should be designed.
- The **GUS** posterior GUSSET is an intimate comfort panel that anatomically allows the sling to fit the arm versus the arm fitting the sling.
- **GUS** also incorporates the most comfortable double roll strapping system that adjusts from each end providing the easiest adjustment and application available.
- Round buckles allow the **GUS** straps to seek their most comfortable attachment regardless of the anatomical differences. Two buckles at the wrist are provided to allow easy sling entrance, eliminating the need to lace your arm into the sling. And no need to painfully shrug your shoulder or flex your elbow to enter **GUS**.
- **GUS** is quality constructed with a deep pocket to accommodate the largest of casts and dressings.
- Super comfortable thumb loop rests the thumb, limiting sling migration of the **GUS**.
