

Handi Tool Rail

Installation Instructions

The Handi Tool Rail is very easy to install. First, determine the area where you want to install the Handi Tool Rail. Then start by locating the wood studs in the wall. You may mark their location with a pencil to help. Place the Handi Tool Rail in the desired location and level it.

Press-fit the End Caps on both ends of the Handi Tool Rail. Drive a screw through both slots and into each stud in the wall for the maximum weight capacity. Color Strips can be inserted into each slot to completely hide the screw heads.
