

15 & 25 GALLON POLY PORTABLE FUEL CARTS

These portable poly fuel caddies provide a safe, effective and affordable method for storing and transferring fuel. Models are available for gasoline (15 & 25-gal red) and diesel (25-gal yellow).

Fuel Carts are both UN/DOT and Transport Canada Approved.

They are ideal for many automotive and "non-automotive" applications for landscape, marine, commercial and recreation. Blow-molded in high-density polyethylene makes them resistant to corrosion or denting.

They can be used in their original "gravity-flow" form or with a heavy-duty two-way rotary pump kit. (FC-PRK13) can easily be added to fill fuel powered equipment when gravity won't.

HANDLING
FUEL

Features include:

- Made from high molecular weight, high density polyethylene (HMW-HDPE)
- Fill and transports in "lay flat" horizontal position
- Gravity flow design
- Molded handle
- 2" filler neck
- Vented fill cap
- HD pneumatic tires/wheels
- 8' 3/4" dispensing hose
- Spring-loaded dispensing nozzle
- Optional pump kit (FC-PRK13)
