FLEXI-BLOCK™

FLEXIBLE SANDING BARS

Three Shapes to Handle All Detail Sanding from Grooves & Channels to Countours & Character Lines

Flexi-Block™ Assortment

Motor Guard has introduced a first of its kind line of flexible sanding bars for detail sanding applications. These new blocks are constructed of a dense yet flexible compound that allows bending to suit body profiles while maintaining a firm and durable backing for highly effective sanding. Each bar measures 11 inches in length.

Motor Guard's new Flexi-Blocks™ are available in three styles, the Rectangular Block (FB-1) for flat sanding and sharp corners, the Double D Block (FB-2) with radiused sides for sanding inside contours, and the Curved Block (FB-3) for complex body lines and details. The blocks are also offered in a see-through pegboard display of all three, the AP-6 Flexi-Block™ Assortment.

From Pulling to Painting, Motor Guard Corporation is celebrating fifty years of providing time-saving and innovative solutions to the auto body repair and refinishing professional.
