Plastic Refinishing

STANDARD OPERATING PROCEDURE

Clean with SEM Soap & a gray scuff pad. Scrub thoroughly, paying close attention to textured or recessed areas.

Wipe with a clean, damp, lint-free cloth to remove all residue.

Apply Plastic & Leather Prep, SEM Solve or XXX Universal Surface Cleaner.

Wipe clean in one direction using a clean, lint-free cloth.

Wiping in one direction will remove contaminates from the surface rather than smearing contaminates over the surface.

If contamination still exists, water will bead on the surface when dry. Repeat steps 1 & 2 until beading no longer occurs.

DETERMINE THE CORRECT ADHESION PROMOTER

A Sure-Coat waterborne coating is not compatible with Sand Free Adhesion

If applying Sure-Coat waterborne coating on ABS, do not use an adhesion promoter.

B When using Bumper Coater flexible coating, an adhesion promoter is not required, with the exception of Low VOC Bumper Coater flexible coating.

Place a drop of acetone on the back of the plastic. Rub with your gloved finger.

If the plastic smears & melts, it is ABS. Use Sand Free Adhesion Promoter.

Apply a medium wet coat of **Sand Free** Adhesion Promoter. See note (A).

While still wet, apply a light coat of Color Coat Avoid applying the first coat too heavily as sagging may occur.

As the **Sand Free Adhesion Promoter** evaporates, Color Coat flexible coating is drawn into the surface resulting in excellent adhesion

If the acetone does not have an effect on the plastic, use XXX Adhesion Promoter or Plastic Adhesion Promoter. See note B

Apply one medium wet coat of XXX Adhesion **Promoter** or **Plastic Adhesion Promoter**. Allow to flash 3 – 5 minutes before topcoating.

Apply Bumper Coater flexible coating, Color Coat flexible coating, Sure-Coat flexible coating, Trim Black, or Trim Black Ultra trim paint.
