

### Quick and easy rough cleaning and stripping of scale and heavy stock on a variety of materials

Rapid Strip products are constructed with thick, strong, synthetic fibers and extra-coarse abrasive. The open web construction provides fast cutting action with very little loading. Rapid Strip is suitable for use in many industries for applications including removal of surface rust and residue, corrosion, light weld splatter, dirt, mill scale and other similar surface contaminants. Rapid Strip products can also be used for paint and epoxy coating removal, surface preparation before applying coatings or prior to welding, and even for cleaning and conditioning after welding.

Rapid Strip products have an open web construction for aggressive cutting action while maintaining a cool, non-loading surface. The thick, strong synthetic fibers and extra coarse grain make light work of removing rust, weld splatter, scale and other surface contaminants.
