6	316-601	3/8" Flat Washer	24
7	416-505	7/32" Long Arm Socket Key	1

Material Needed:

Concrete: Approximately 8-80 pound bags 2 x 4 or equivalent:
For bracing of structure.

Assembly:

1. Lay out posts and panels on the ground in the desired location.
2. Install the panels to the post with supplied hardware. Tighten all hardware.
3. Mark hole locations on ground using stakes, holes should be 38.5" center to center.
4. Dig holes 22" deep; using a transit to make sure that the holes are all equally deep.
5. Now stand the climber up and into the holes (4 people are required for this step).
6. Using 2x4's brace the climber level in the holes, make sure it is securely braced.
7. Once the climber is level in all directions pour concrete in the holes and allow to set 48 hrs. before opened to children.
8. Always install a resilient safety surfacing under all play equipment.
