

Installation Guide

Case L Series Dozer KM 722 Mechanical Kit (PN: 6966)

1. Remove original seat and suspension. Keep the original bolts that held the seat to the floor. Also remove the tether straps that were on the original seat and suspension.
2. Mount the PED 6148 to the bottom of the new suspension using four 5/16" x 3/4" flat head socket cap screws and flange nuts. Loosen the lower part of the rubber boot to get the nuts onto the screws.
3. Install the seat belt and mount the original tether straps to the seats. Use the instructions provided with the seat belt kit. The tether straps will fasten in between the bushing and the seat belt.
4. Place the seat, suspension, and PED assembly into the dozer and fasten in place using the original bolts. Be sure the free end of the tether straps get mounted to the floor on top of the PED 6148.
